

AVERAGE TEMPERATURE SENSOR TEKA PT1000

TEKA PT1000 sensor is made for detecting and averaging temperature in a large air duct.

Temperature is detected by four Pt1000 elements. Thanks to the special mechanical construction the sensor is able to detect temperature throughout its entire length.

Housing is made of heat resistant plastics.

Screw cover and terminal blocks tilted to 45° make an easy installation.

Sensor is mounted to the duct by means of an adjustable flange and springs.
